

Delivering laboratory water purification systems and solutions for research, science and clinical environments.

Overview

From point-of-use laboratory products to complex central water systems, we offer help and expertise at all stages, from conceptualising and finalising laboratory water system design, through to build, system installation and validation. We work closely with leading laboratory instrument companies to customise water purification systems. We also play a proactive role with pure water standards organisations that develop and recommend laboratory water quality requirements.

We help our laboratory customers to achieve the laboratory water quality they need for their application. We use the latest water treatment technologies to supply laboratory water where it's needed at the right water quality and in the right volumes.

We specialise in:

- laboratory water purification systems
- services for research
- science
- pharmaceutical
- industrial
- clinical laboratory environments biotechnology.
