

Offering produced water and water treatments for the upstream oil and gas industry.

Overview

Our mobile water solutions and associated environmental services are available to support the exploration and extraction of shale gas.

We offer extensive experience and a wide range of water treatments for the oil and gas industry. Water is an essential part of oil and gas upstream field production, so we provide expertise and treatment technologies and processes for all types of conventional and non-conventional extraction. This includes developing, implementing and servicing [sludge](#), [wastewater](#) and water treatment plants for oil refineries, petrochemicals and the gas industry.
