

Solutions to design, build, maintain and upgrade municipal water and wastewater treatment facilities.

Overview

We can tailor our offering depending on your project, from installing individual engineered solutions or packaged plants, to complex design and build projects. Our goal is to develop sustainable and superior solutions that balance cost-effective technology with protecting the environment.

We offer innovative and sustainable [drinking water](#) and [wastewater treatment](#) technologies for municipal water customers - in both urban and rural settings - alongside a complete range of maintenance services. In addition to traditional treatment processes, we have also created our own patented, technological solutions to treat water, wastewater, biosolids, [sludge](#) and [odour](#), and provide [waste-to-energy](#) services for municipal customers.
