

Municipal drinking water systems and management of surface and ground water.

Overview

How Veolia provides safe drinking water

Water companies need to supply high-quality drinking water to a growing population while at the same time combatting environmental and technological challenges. We support water companies by sharing our unique expertise in drinking water treatment and implementing our wide range of patented technologies.

As water engineering specialists with decades of experience in the business, we can reduce the environmental impact and improve the performance and safety of drinking water treatment facilities. We use first-in-class technologies and water disinfection additives to treat bacteria and micro-organisms, and remove phosphorus, pesticides, arsenic, heavy metals and other hazardous substances. We are experts in ensuring correct water disinfection treatment and the management of surface and ground water.

We improve the performance and safety of drinking water treatment facilities by using water treatment technologies and water disinfection additives, by treating bacteria and micro-organisms and by removing pesticides, arsenic, heavy metals and other hazardous substances.
