

TYPE 2+ AND TYPE 2 PURE WATER

Type 2 (Pure Water) is the grade for general laboratory applications and an essential part of creating chemical reagents, microbiological buffers and media that need to be kept consistently pure.

Type 2+ is recirculated like Type 1 (Ultra Pure) water, allowing it to have a higher resistivity than Type 2.

We offer solutions that are:

Flexible - Versatile - Modular
PURELAB Chorus | PURELAB Flex
